Companies Achieve Productivity Gains with Galaxy's Automated Time and Attendance Solution

Madison, WI, March 25, 2002: Galaxy's TimeStar™ is a software solution used by companies nationwide to allocate, track, analyze, and control labor resources, enabling them to improve labor management, productivity, profitability, and labor relations.

TimeStar eliminates the need for manual data entry of payroll records and manual timekeeping calculations, by automating the collection of employee hours worked. Pay rules are then applied consistently and correctly throughout processing. TimeStar reduces the accounting workload and eliminates errors that occur when payroll data is processed manually.

TimeStar accommodates the collection and processing of labor data in companies ranging in size from 10 to 5,000 people, in a multitude of different industries including manufacturing, healthcare and banking. TimeStar is easily interfaced to mainstream HR and payroll software solutions and service bureaus. Unlike most shrink-wrapped time and attendance solutions, Galaxy can generate a unique TimeStar solution to fit each client's individual HR and payroll system by modifying standard TimeStar modules to accommodate legacy payroll practices and rules, or by creating a seamless non-standard payroll system interface.

In addition to gathering employee in/out punches, handling pay rules, calculations, and scheduling, TimeStar centralizes the maintenance of employee personal data and status. The addition of a new employee, or changes made to an existing employee's address and phone number can be made in one place and ripple throughout the system.

TimeStar software gives users a tool that they are familiar with. It runs in a Microsoft Windows-based environment including Windows XP.

TimeStar can be coupled with a multitude of time and attendance input devices. Galaxy offers punch devices including badge readers, biometric hardware, and PC-based collection equipment. Their product PC Professional Web™ facilitates time and attendance data collection at remote facilities corporate-wide on inexpensive PCs and communicates those records to a central office via the web using secure data encryption algorithms.

TimeStar includes over 30 standard reports to help managers make decisions regarding labor. The reports address attendance, scheduling, exceptions and errors, overtime, tardiness, punch in, punch out, and other subjects. Custom reports can also be created and displayed online or printed.

Galaxy's Vice President, Tammy Wacek states, "Many people that we speak to have evolved their processes as their companies grew, and would rather not change the way they do business to accommodate a new system. We have helped many of these companies by listening to their individual requirements and changing the TimeStar program to mirror their needs. They become satisfied long-term customers while we go forward and evolve together."

Galaxy will soon announce its newest product TimeStar Enterprise™, a browser-based, web-enabled version of the TimeStar product that accommodates highly decentralized workforces.
